Continuation of 5. does NOT place the application in condition for allowance because: Applicants' arguments are not persuasive. Applicants argue that Jois and Moore do not disclose "receiving a predetermined region selection signal indicative of a user interface selection device pointing at a selected predetermined region on the display." Applicants address that the statement "selecting a predetermined region where each region has a different style selected for generating a web page inherently shows that the system has the selection signals for the selection actions when selecting the subtemplates of different styles" in the Action is an allegation.

Examiner respectfully disagrees.

Jois does disclose selecting a subtemplate included in the master template for generating the web page layout (col 6, lines 14-34) where each subtemplate for each region of the web page has different styles of data implemented in HTML tags (col 7, lines 6-25). Accordingly, whenever a user selects a subtemplate of a style using a mouse or any selection device, it is true that the system must receive a selection signal from the selection action where the selected subtemplate is a selected predetermined region on the display. Jois, therefore, does suggest the argued feature. And the Action's reason for modifying Jois to incorporate the argued feature, therefore, is not an allegation.
